The defence review day

FOR PROGRAMME TEAMS, PRIMES AND SUPPLIERS

Whether you set the requirement, integrate the system or build the equipment, you are working towards the same thing: capability that works where it is used, delivered at pace, affordable and scalable. With fleets to upgrade quickly, a move to autonomous, networked systems that must work with our allies, and time and money tight on every side, the questions that matter most often sit between teams and organisations.

30 minutes
A free first conversation about the question in front of you

One day
On a question you choose, on site, by video or a mix, with whoever you want involved

Within a week
Written priorities and actions, yours to keep

£2,500 + VAT
Fixed fee for days booked by 31 December 2026. £4,999 + VAT from 1 January 2027

Who it suits

A supplier new to defence
You have equipment or expertise defence could use, and you are learning at speed how security, organisations, decision-makers and procurement work, while still running the business. The day helps you see what a prime or programme team will look for, and what to put in place first.

A supplier joining a prime's programme
Your equipment has to work with everyone else's and be supported for years. The day looks at what integration, trials evidence, spares and support will ask of you, so the surprises come early, while the design and the plan can still change.

A programme or prime team
You would value an independent view, from the operator's side, of requirements, integration, interoperability and through-life support, on one question, before money is committed or a design is fixed.

What happens, and when

1. **A free 30-minute conversation**, by video or phone, about the question in front of you. If a review day isn't the right help, Brad will say so.
2. **Agree the question.** A short written scope: the question, who should take part, and the papers worth reading beforehand. Only what you are able to share.
3. **The day**, usually within two to three weeks. Brad works through the question with you and whoever you choose to involve, from engineering and trials to support and commercial.
4. **Within a week**, the written priorities and actions.
5. **You decide what next.** You may take the actions forward yourselves. If you would like help, that is agreed separately, with no obligation.

What you keep

- A short written report: the question, what was looked at, and what was found.
- The priorities in order, with the reasoning, so you can explain them to colleagues and customers.
- Practical actions, each with a suggested owner.
- Assumptions and gaps stated plainly, including where your own specialists or independent testing are still needed.

Confidential from the first conversation. Brad is happy to sign a non-disclosure agreement before the day. Where the day happens and who takes part are up to you; any travel is agreed with you beforehand.

Who you would be working with

Brad Wright CEng is a former Royal Navy weapon engineer officer. In 18 years' service he ran a destroyer's weapon engineering department in the 2003 Gulf campaign and, at the Defence Procurement Agency (now part of DE&S), led surface anti-submarine warfare systems from concept into service, including multinational trials. He won NATO approval for a sixteen-nation munitions standardisation programme, and holds an MSc in Guided Weapon Systems from Cranfield. Since the Navy he has led fast-track delivery in secure organisations, including London 2012 security, and run engineering businesses.

Start with a conversation

Thirty minutes, free, by video or phone, about the question in front of you. There is no obligation to book a review day.
