The defence review day

FOR PROGRAMME TEAMS, PRIMES AND SUPPLIERS

Before you commit to a bid, fix a design or go into a trial, I'll review one question with your team: how the equipment will really be used, what the evidence supports, and what you may need to resolve while you can still change course.

FREE
30 minutes
A stand-alone conversation about the question in front of you. No cost and no obligation

THE REVIEW DAY
One day
On a question you choose, in person or by video call, with whoever you want involved

Within a week
A written assessment of the gaps that could affect your decision, and what to do first

£2,500 + VAT
Introductory fee for days booked by 31 December 2026 (£4,999 + VAT from 1 January 2027). Includes the agreed reading and the report

What happens, and when

1. **The free conversation.** If a review day isn't the right help, Brad will say so.
2. **Agree the question.** A short written scope: the question, who takes part, and what to read beforehand.
3. **The day**, usually within three weeks, with whoever you choose to involve, from engineering and trials to support and commercial.
4. **Within a week**, your written assessment.
5. **You decide what next.** Take the actions forward yourselves, or ask for help, agreed separately.

What you get

- A written assessment of the question we agreed, the gaps that could affect your decision, and what I'd do first.
- The priorities in order, with the reasoning and a suggested owner for each action.
- Assumptions and gaps stated plainly, including where your own specialists or independent testing are still needed.

Safe to scope. On the first call, describe the question in general terms. Before any papers are sent, we agree what can be shared, how, and whether an NDA is needed. Travel for days in person is agreed beforehand and charged at cost.

Who it suits

A supplier on a prime's programme
Your equipment has to work with everyone else's and be supported for years. The day looks at what integration, trials evidence, spares and support will ask of you, while the design and plan can still change.

A supplier weighing up a bid
You have equipment or expertise defence could use, and a requirement in front of you. The day tests whether you can bid for it credibly, and what you would need in place first.

A programme or prime team
You would value an independent view, from the operator's side, of requirements, integration and through-life support, on one question, before money is committed or a design is fixed.

Who you would be working with

Brad Wright CEng has been trusted to deliver some of the nation's most critical programmes, at pace, in highly regulated organisations where resources are always tight. He held DV security clearance for 25 years, working on high-hazard and Top Secret defence and government sites including DstI, UKHSA, Hanslope Park and the Docklands Light Railway. In short order he took Carillion's 4,500 critical national infrastructure sites from 38% to 100% compliance, lifted strategic accounts including DstI to 97.5% against 62 KPIs within 90 days, led £384m of London 2012 security projects, mobilised and transformed Interserve Defence's 99 sites ahead of a £980m re-bid, and cut approval times for £30m to £300m MOD ICT programmes from 18 months to about three. In the Navy he served at sea on operations and took anti-submarine warfare systems from concept into service.

Why that matters to you. Your team may already include former senior officers or consultants. Brad brings the operator's, the buyer's and the supplier's view in one person, and three decades as a consultant and director. He identifies the gaps and recommends what to do; your team owns what happens next.

Book a 30-minute defence call

Thirty minutes, free, by video or phone, about the question in front of you. There is no obligation to book a review day.
